## — ScanSnap Cloud —

Device-less scanning, straight to the cloud.

## ScanSnap Cloud<sup>1</sup>

Introducing a new, productive way of scanning documents directly to your cloud. With your ScanSnap iX models and ScanSnap Cloud, there is no need to be connected to a desktop or mobile device. Simply press "Scan".

<sup>1</sup> ScanSnap Cloud is available only in selected countries. For more information, please visit [fujitsu-scansnap.com/scansnap-cloud](http://fujitsu-scansnap.com/scansnap-cloud)

# Features

### a. Direct connection to the cloud

Scan to popular cloud services without the need for a computer or mobile device. All you need is a ScanSnap scanner and a Wi-Fi network<sup>2</sup>.

<sup>2</sup> ScanSnap Cloud is based on the Wi-Fi environment services available in the office or at home. Public wireless LAN services are not supported. You can use the device outside by tethering it to a mobile router or smart device.

### b. Transform scanning workflow

With one touch of the Scan button, ScanSnap Cloud automatically classifies scanned data into four categories: documents, receipts, business cards and photos. Scanned data is automatically sorted and delivered to its predetermined cloud service.

### c. Automatic and intelligent functions

#### i. Image optimization

Before delivering scanned documents to selected cloud services, ScanSnap Cloud optimizes scanned images with its advanced functions: Auto Color Detection, Auto Size Detection, Auto Rotation and Blank Page Removal.

- Automatic Color Detection

- Automatic Size Detection

- Automatic Rotation

- Blank Page Removal

#### ii. Name assist

Files are automatically named using extracted keywords and dates from scanned documents, receipts and business cards.

#### iii. Searchable PDF creation

Searchable PDF files can be produced on ScanSnap Cloud<sup>3</sup>. Search through your documents with keywords to find the one you need on all your favorite document management cloud services.

<sup>3</sup> Searchable PDF generation is limited to 500 pages per month. All pages after the 500<sup>th</sup> page will be generated as normal PDFs. There are no limitations on the number of normal PDFs that can be generated. If number of scanned pages exceed 500 while scanning multiples pages in the same document file, these pages will be generated as a single searchable PDF.

#### iv. Security

ScanSnap Cloud utilizes Microsoft Azure™, known throughout the world to provide protection for cloud data with its robust security platform.

### d. Capture and access data anywhere anytime

The smart device capture functionality<sup>4</sup> allows scanning of important documents on the go, even when your ScanSnap scanner is out of reach.

Because data can be accessed from cloud services, you can easily check and edit data on your smart device, allowing you to access important information wherever you are, whenever you need.

<sup>4</sup> Available only for those who have ScanSnap scanners.

## System Requirements

### Computer

Please refer to the "System Requirements" for each scanner model.

### Mobile Device

Supported Models		ScanSnap iX1500 / iX500 iX100
Hardware	iOS	iPad4 or later iPhone 5 or later iPod touch 6th or later
	Android	CPU ARM processor (Recommended: 2.7 GHz quad-core or higher) Memory 512MB or bigger (Recommended: 3GB or more)
OS	iOS	iOS10.3 or later
	Android	Android 4.4 or later
Number of Available Device		Maximum 5 devices per user account

Available for Mac and Windows OS.
